

Changes made to TempTrack™ System for FCC Compliance

Heatshrink over primary antenna connection

Unused antenna ports deactivated by Software: User can not select other ports

Step 1: *continued...*

The software will apply regulatory restrictions based on your geographic region. The FCC compliant version of the kit will include software that conforms to FCC requirements. The CE compliant version of the kit will include software that conforms to CE requirements:

- FCC requirements impose the following restrictions on the reader:
 - The reader will read sensors only once every 30s.
 - The reader will only make use of one antenna. The other two antenna ports are deactivated on FCC compliant readers.
- CE requirements restrict the reader to only operate in the 433 MHz ISM-Band. This means that you will only be able to read one sensor with a CE compliant reader.

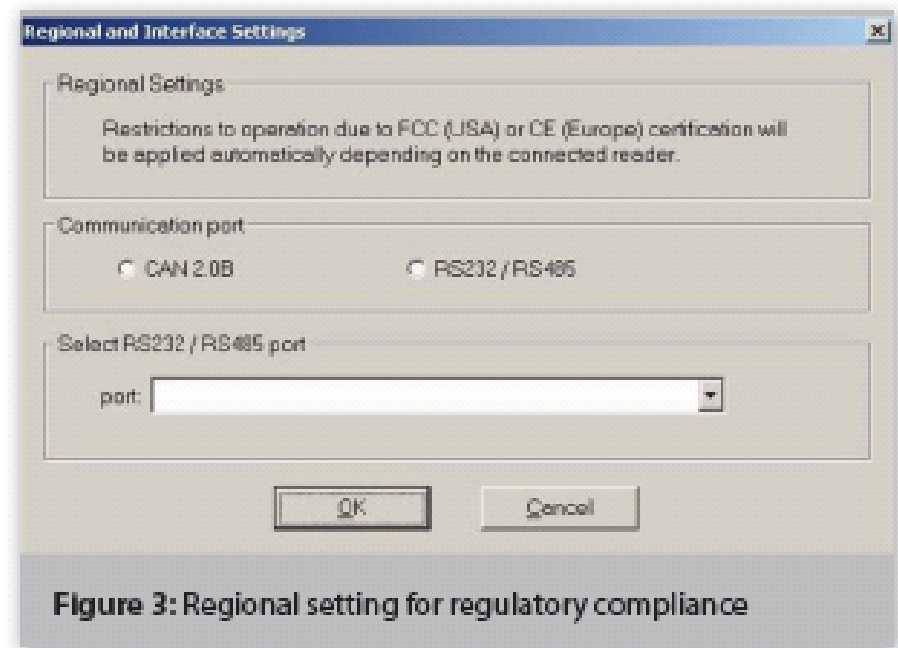

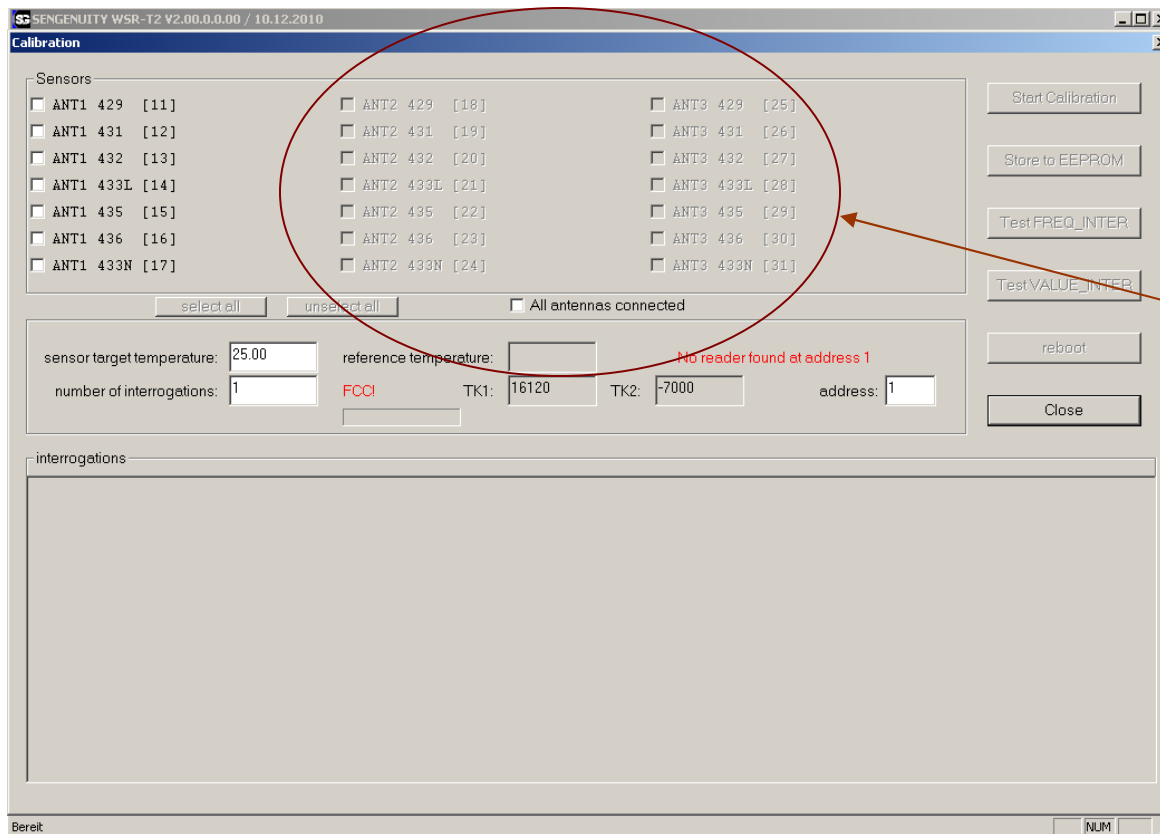

Figure 3: Regional setting for regulatory compliance

Unused antenna ports deactivated by Software

Antennas 2 & 3 Deactivated for FCC compliant readers
